OBJECTIVE

Recent university graduate with hands-on experience in developing and deploying web applications, seeking a full-time role or internship to apply technical skills and contribute to impactful solutions in real-world environments. Driven by a passion for problem solving and supporting others with their technical needs.

EDUCATION

Bachelor of Science, Computer Science

California State University, Los Angeles

Awards: *Cum Laude*

May 2025

GPA: 3.58

TECHNICAL SKILLS

Languages: Java, Python, SQL, HTML, CSS, JavaScript, C++

Tools: Agile, JIRA, Slack, GitHub, MVC, Cloud Firebase, MongoDB, Flutterflow

Libraries/Frameworks: Bootstrap, React.js, Node.js, NumPy, Pandas, Matplotlib, TensorFlow, Scikit-Learn, Keras, Tailwind CSS

WORK EXPERIENCE

We2Link

Junior Software Developer

Aug 2024 – May 2025

Remote, USA

- Engineering a full-stack application with React.js and Firebase to enhance memory management for users with cognitive impairments by helping them efficiently organize memories, passwords, and daily tasks.
- Collaborated in a sub-team of 3 software engineer interns in code reviews and scrum sessions, providing constructive feedback to improve designs, code quality, and development processes.
- Significantly reducing redundancy and improving contact management by creating a feature that identify and merge duplicate contacts based on phone number and/or email.

PROJECTS

Dessert Shopping Cart

Frontend Mentor, Personal Project

Sept 2025 - Oct 2025

- Developed the frontend using React.js and Tailwind CSS, delivering a responsive and user-friendly interface for the Product List with Cart challenge.
- Built the backend as part of a full MERN stack, using Node.js, Express.js, and MongoDB to create robust APIs and manage data persistence.
- Implemented a category-based dropdown filter to enhance product browsing and improve user experience.
- Utilized React Context API to manage cart state, including item tracking and total price calculation.
- Deployed the application on Render, configuring separate services for the frontend and backend for scalable deployment.

Poker Web App

Current Trends in Web Designs, California State University, Los Angeles

Jun 2024 - Sept 2024

- Developed a web-based Poker game using Node.js, handling game logic, user interaction, and server-side functionality to deliver a seamless gameplay experience.
- Integrated MongoDB as backend storage using MongoClient and CRUD operations to store game scores, with dotenv used to securely manage environment variables and protect database credentials.
- Integrated the Deck of Cards API to simulate a dynamic card deck for a Poker web app, using Axios with async/await for smooth data fetching and added error handling to improve reliability and user experience.
